

Meeting Agenda

Date: Tuesday, 2013-04-18

Participants: Everybody

1. Objectives (5 min)

Refactor the code so it follows the MVC model.

Get necessary programs to test our code.

2. Reports (15 min)

We implemented a bit of physics, made the graphic presentation of the character change color and added useful methods, unfortunately we put it in the wrong classes.

3. Discussion items (35 min)

We need to refactor the code and split it into the right classes, following the MVC model.

When having a meeting with our supervisor we found out about some programs that we need to use.

4. Outcomes and assignments (5 min)

We'll cut out all code in our classes and start from the top. We'll do this with a projector so everyone can delegate the code to the right place.

We will download useful programs such as STAN, PMD and FindBugs to help us keep track of the code.

Our main focus until next meeting will be to refactor all code so the MVS model is followed correctly.

Find a room with access to a projector.

Book rooms for upcoming meetings and work time.

5. Wrap up

Next meeting: Tuesday April 23th, 15:00-16:00.
